Career Objective

I am a Junior Web Developer looking to expand my skills in the field of front end development. I have a keen interest in CSS and JavaScript and its many libraries and how they can interact with each other to produce an intuitive and memorable user experience. Having recently completed the Web Development Immersive course at General Assembly, I am excited to grow my career by being part of a supportive and collaborative team.

Skills and Experience

Programming / Website Development Skills

- HTML5
- CSS3 (SASS)
- JavaScript (jQuery, backbone.js, phaser.js)
- Ruby / Ruby on Rails
- Postgresql / Activerecord

Education

November 2015 - February 2016

General Assembly - Web Development Immersive

March 2010 - December 2013

University of Technology, Sydney, Broadway Campus

- Bachelor of Science in IT

Recent Projects

[Links to each of my projects can be found on my profile site.](#)

Memory

Memory is a javascript app that emulates the card game memory. Memory is a card game that can be played by one or more players. This version is built for only one player. The game starts by spreading even number of cards face down over a playing surface. Players or player then take(s) turns flipping two cards over. If the cards match, then they remain flipped over. The aim of the game is to flip all of the cards over.

I used HTML, CSS and jQuery to create this app.

Interact

Interact is an app where a user can upload an image of their choice to be converted into a interactive puzzle. Using Javascript, the image is broken into a grid of rectangles that can be arranged to reform the image by clicking and dragging. I used a Ruby on Rails backend to support user functionality.

I used HTML, CSS, jQuery and Ruby on Rails to create this app.

Space Race

Space is an 8-bit arcade shooter themed game made with phaser.js. The concept of the project was to make a game that updates its controls and graphical style as your progress through the levels. This project was completed in a team of four. I was in charge of level design and implementation. We also created a backend for users to sign up and save their high-scores.

We used phaser.js, underscore.js and Ruby on Rails to create this project.

Cascading Style Quiz

Cascading Style Quiz involves a series of challenges whereby the user is presented with an element on the page that has been styled with css and given the job of entering the correct css to style their own element in an identical manner. I used HTML, CSS, jQuery and underscore.js to create this app.

Employment History

Junior Web Developer

Support Opportunity & Care Inc.

January 2015 – October 2015

I was contracted as a freelancer to liaise with the company representative and re-develop the Support Opportunity & Care inc. (SOCl) company website as well as develop a separate blogging website, Mental Health Magazine, using the following technologies:
